

ABB MEASUREMENT & ANALYTICS | DATA SHEET

# ProcessMaster FEP630

## Electromagnetic flowmeter

# **Measurement made easy**

## The first choice for all industrial applications

### **Diagnostics for real-life situations**

- To keep your process up and running
- Gas bubble, partial filling or empty pipe detection, Electrode impedance, conductivity and sensor temperature monitoring
- Clear Text Messages for simplified trouble shooting

### **On board Health Check**

- Flowmeter sensor and transmitter integrity check utilizing fingerprint technology

### **Noise / Grounding Check**

- Verify the installation is correct from day one

### **Service Interval Monitoring**

- Receive timed notifications

### **Backwards Compatibility**

- Protect your Investment in ABB flowmetering

## ProcessMaster series

ProcessMaster is available in two series – ProcessMaster 610 the good fit for everyday applications and ProcessMaster 630 the first choice for all process industry applications delivering best in class functionality and options.

Applicability	FEP610 series	FEP630 series
	Good fit for everyday applications	The first choice for all industrial applications
<b>Chemical Industry</b> Corrosive liquids, acids, bases	✓	✓
<b>Power</b> Coal slurry, Lime slurry, Cooling	✓	✓
<b>Mining</b> Abrasive slurries, hydraulic transport	✓	✓
<b>Pulp &amp; Paper</b> Stock Flows, Latex, Clay, Liquor, Chemicals	Up to 2 % Stock	Up to 4 % Stock
<b>Oil &amp; Gas</b> High pressure applications	✓	✓
<b>Food &amp; Beverage</b> Hygienic applications	✓	✓
<b>Measuring medium minimum conductivity</b>	20 µS/cm	5 µS/cm
<b>Measuring medium temperature</b>	Up to 130 °C (266 °F)	Up to 180 °C (356 °F)
<b>Pressure</b>	≤ PN 40 / CI 300	≤ PN 40 / CI 300
<b>Hazardous area</b>	–	Yes

Features	FEP610 series	FEP630 series
<b>Accuracy</b>	0.5 %	0.4 %, Option up to 0.2 %
<b>Nominal diameter</b>	DN 3 ... 2000 (1/8 ... 80 ")	DN 3 ... 2000 (1/8 ... 80 ")
<b>Liner material</b>	PTFE, Rubber, PFA, ETFE	PTFE, Rubber, PFA, ETFE, Ceramic Carbide
<b>I/O's</b>	1 x analog, 2 x digital	1 x analog, 2 x digital, Option for add-in modules
<b>Communication</b>	High Speed Infrared Port Communication based on HART DTM	HART, PROFIBUS, Modbus
<b>Process diagnostics</b>	Empty pipe	Empty pipe, Partially filling, Gas bubbles, Electrode Impedance, Conductivity, Sensor temperature
<b>Backwards compatibility</b>	–	Yes

## ... ProcessMaster series

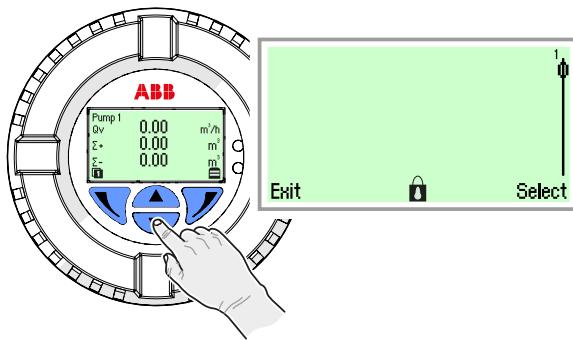

### Features and Functions

#### On-board Health Check

ProcessMaster's in-built fingerprint technology helps to ensure Sensor and Transmitter Integrity without the need to remove the flowmeter from the process. The Check provides a pass / failed result based on a comparison of the current flowmeter status to a set of reference data.

#### Benefits:

- Easy to operate
- No additional equipment required
- No training necessary
- Quick check of flowmeter integrity

#### Backwards Compatibility saves your Investment in ABB Flowmetering

Take advantage of new features and improved performance. Switch to the new product at your own timeline. Minimize the cost of change in stock keeping, documentation and change of internal processes.

#### Benefits:

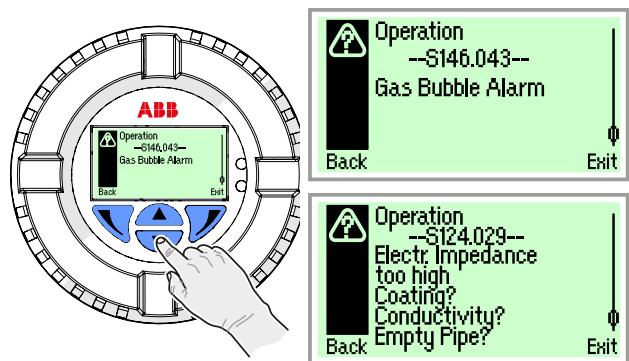

- Drop in replacement
- Same terminal designation I/O's, sensor connections
- No need to change wiring documentation
- Sensor cable stays unchanged
- Identical operating philosophy:  
Easy Set-up and Sensor Set-up
- Common user experience, less training
- Less inventory, less cost

#### Diagnostics for real-life situations

Detecting critical process conditions at an early stage helps reducing unscheduled downtime and maintenance. Clear text messages simplify troubleshooting. Device diagnostic information can be accessed without any intervention – either through the HMI or bus communication.

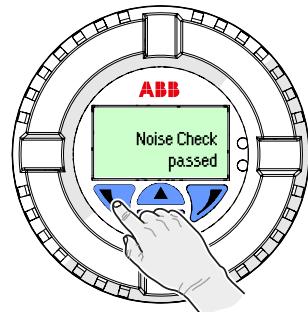

#### Benefits:

- Peace-of-mind that flowmeter is operating within its specification
- Prioritized alarms to correct most important alarm first
- Through-the-glass operation without the need to open the housing

#### Verify the Installation is correct - from day one

Improving quality and reducing cost can be a challenge if the flow measurement is unstable. A proper grounding is fundamental to an accurate electromagnetic flow measurement. ProcessMaster's in-built noise / grounding check helps getting the wiring / grounding right from day one without the need for further tools.

## Diagnostic functions

### Standard functionality

#### Flowmeter sensor coil inductance

A measurement of the flowmeter sensor coil inductance can be triggered. This enables to check for the flowmeter sensor coil integrity.

#### Noise check / Grounding check

This function allows checking for noise and proper electrical grounding of the device. While the check is in progress, no flow measurement can take place.

Pre-requisites using the functionality:

- Flowmeter sensor must be completely filled
- No flow must occur in the flowmeter sensor

### Fingerprint

The "fingerprint" database integrated in the transmitter allows for comparison of the values at the time of factory calibration or commissioning with the currently recorded values.

A quick "on-board health check" resulting in a pass / fail information can be performed.

For an in-depth verification, an external tool is available from ABB (in preparation).

### Detection of partial filling

A partially filled sensor affects the flowmeter reading and the measuring accuracy.

If the flowmeter sensor is ordered with a full pipe detection electrode, which is located at the Top of the sensor, the transmitter's "Diagnosis TFE" function enables for an alarm in case the sensor tube starts to become partially filled.

Pre-requisites using the functionality:

- Nominal diameter: > DN 50 (> 2")
- Flowmeter sensor design level A
- Conductivity of the measuring medium: 20 ... 20000 µS/cm

Installation conditions:

- The flowmeter sensor must be installed horizontally with the terminal box pointing upward.

### Verification

There is an Option for an in-depth verification of the device using an external Tool from ABB.

This Tool provides a brief documentation of the Verification results allowing for a print out.

## ... ProcessMaster series

### Optional diagnostic functions

The extended diagnostics functionality package contains the following functions.

### Gasbubble detection

Gas bubbles in the fluid effect the flowmeter reading and the accuracy. Enhanced diagnostics feature the option for gas bubble detection to make the flow measurement most reliable. There is the option for a gas bubble alarm triggered once the actual gas bubble value exceeds the threshold configured. This alarm is shown in the HMI. The digital output flags an alarm if configured accordingly.

#### Pre-requisites using the functionality:

- Nominal diameter: DN 10 ... 300 (3/8 ... 12").
- Conductivity of the measuring medium: 20 ... 20000 µS/cm.

#### Installation conditions:

- The flowmeter sensor can be installed either horizontally or vertically. Vertical installation is preferred.

### Conductivity monitoring

The conductivity of the fluid can be monitored setting minimum / maximum alarm limits.

Once alarm limits are exceeded, the digital output flags an alarm if configured accordingly.

Conductivity is available as a 4 ... 20 mA output (Option card).

#### Pre-requisites using the functionality:

- Conductivity of the measuring medium: 20 ... 20000 µS/cm.

### Electrode impedance

An Impedance measurement between the electrode and ground can be triggered.

This enables to check for the electrode integrity.

### Flowmeter sensor temperature

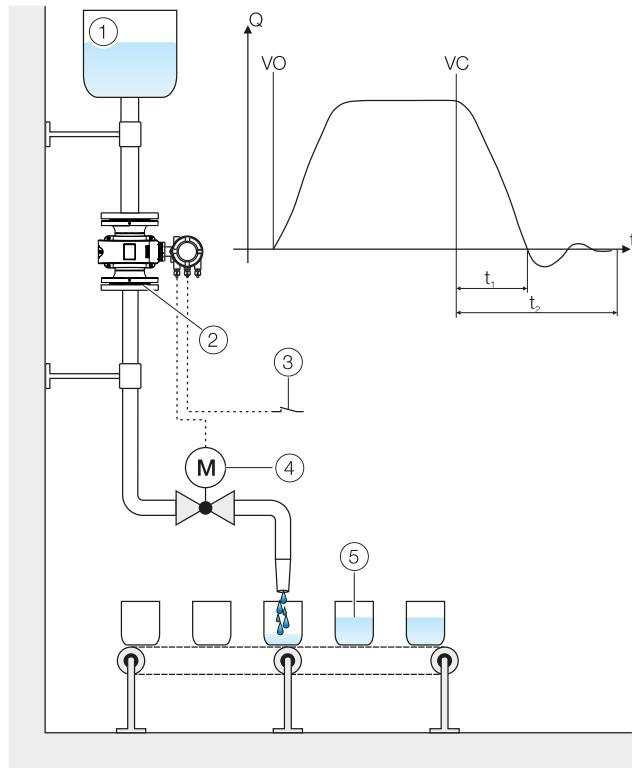

A flowmeter sensor temperature measurement can be triggered. This enables to check for the flowmeter sensor temperature. With flowmeter sensor temperature out of spec, the digital output flags an alarm if configured accordingly.

### Transmitter in-house temperature

A in-house temperature measurement can be triggered. This enables to check for the temperature inside the transmitter housing.

With the temperature out of spec, the digital output flags an alarm if configured accordingly.

## Batching function

The optional batching functionality allowing for batches with filling times >3 seconds.

Batch quantity is configurable and batch process can be started using the digital input (Option card).

Once batch quantity is reached closing the valve can be triggered using the digital output.

Batch quantity correction is calculated measuring the overrun quantity.

Low flow cut-off can be configured, if required.

## ... Overview – models

### Measuring principle

Measurements performed by the electromagnetic flowmeter are based on Faraday's law of induction. A voltage is generated in a conductor when it moves through a magnetic field.

G12000

**Fig. 4: Electromagnetic flowmeter schematic**

Pos.	Description
①	Magnet coil
②	Meter tube in electrode plane
③	Signal electrode

**Table 8: Legend**

$U_1 \sim B \times D \times v$	$qv = \frac{D^2 \times \pi}{4} \times v$	$U_1 \sim qv$
$U_1$ – Signal voltage	$v$ – Average flow velocity	
$B$ – Magnetic induction	$qv$ – Volume flow	
$D$ – Electrode spacing		

This principle is applied to a conductive fluid in the meter tube through which a magnetic field is generated perpendicular to the flow direction (see Fig. 4).

The voltage induced in the fluid is measured by two electrodes located diametrically opposite each other.

This signal voltage is proportional to the magnetic induction, the electrode spacing and the average flow velocity. Considering that the magnetic induction and the electrode spacing are constant values, a proportionality exists between the signal voltage  $U_1$  and the average flow velocity. From the equation for calculating the volume flowrate, it follows that the signal voltage is linearly proportional to the volume flowrate.

The induced voltage is converted by the transmitter to standardized, analog and digital signals.

## Flowmeter sensor

### Measuring accuracy

#### Reference conditions

##### According to EN 29104

Measuring medium temperature	20 °C (68 °F) ± 2 K
Ambient temperature	20 °C (68 °F) ± 2 K
Power supply	Nominal voltage acc. to name plate $U = \pm 1\%$ , Frequency $f = \pm 1\%$
Installation condition	• Upstream >10 x DN, straight section • Downstream >5 x DN, straight section
Warm-up phase	30 min

#### Repeatability, response time

Repeatability	Response time <sup>1)</sup>
$\leq 0.11\%$ of measured value, $t_{\text{meas}} = 100\text{ s}, v = 0.5 \dots 10\text{ m/s}$	As step function 0 ... 99 % $5\tau \geq 200\text{ ms}$ at 25 Hz excitation frequency
	$5\tau \geq 400\text{ ms}$ at 12.5 Hz excitation frequency
	$5\tau \geq 500\text{ ms}$ at 6.25 Hz excitation frequency

Table 12: Repeatability, response time

1) Of current output with damping of 0.04 seconds.

### Measuring error and repeatability

#### Measuring error

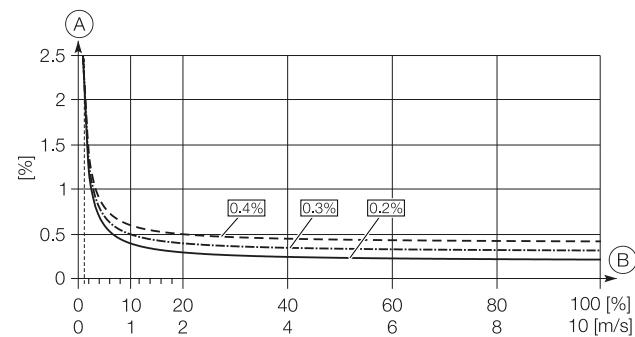

Fig. 5: Measuring error

##### Pos. Description

(A)	Accuracy $\pm$ of measured value in %
(B)	Flow velocity $v$ in $\text{m/s}$ , $Q / Q_{\text{max}}, \text{DN}$ in %

Table 9: Legend

#### Impulse output

##### Standard calibration DN 3 .... 2000

DN 3 .... 2000:  $\pm 0.4\%$  of measured value,  $\pm 0.02\% Q_{\text{max}}, \text{DN}^{\text{1)}$

##### Optional calibration

DN 3 .... 600, 800:  $\pm 0.3\%$  of measured value,  $\pm 0.02\% Q_{\text{max}}, \text{DN}^{\text{1)}$

##### Or

DN 10 .... 600, 800:  $\pm 0.2\%$  of measured value,  $\pm 0.02\% Q_{\text{max}}, \text{DN}^{\text{1)}$

Table 10: Measuring error impulse output

1)  $Q_{\text{max}}, \text{DN}$ : See table in chapter "Measuring range table" on page 16.

#### Current output

Same as pulse output plus  $\pm 0.1\%$  of measured value  $\pm 0.01\text{ mA}$

Table 11: Measuring error current output

### Permitted pipe vibration

In accordance with EN 60068-2-6.

Applicable to sensors in remote mount design and sensors in integral mount design.

- Maximum deflection: 0.15 mm (0.006 inch) in the 10 ... 58 Hz range
- Maximum acceleration: 2 g, in the 58 ... 150 Hz range

### IP rating

- IP 65 / IP 67 in accordance with EN 60529
- IP 68 in accordance with EN 60529 (for remote mount design only)
- NEMA 4X

### Signal cables

For remote mount design only.

The maximum signal cable length between flowmeter sensor and transmitter is 200 m (656 ft).

A 5 m (16.4 ft) cable is included in the scope of delivery. If more than 5 m (16.4 ft) is required, the cable can be ordered separately (Part no. 3KQZ407123U0100).

For marine applications, a certified signal cable is available.

---

## ... Flowmeter sensor

### Temperature data

#### Storage temperature range

-40 ... 70 °C (-40 ... 158 °F)

The temperature range offered depends on a number of different factors.

These factors include the measuring medium temperature  $T_{\text{medium}}$ , the ambient temperature  $T_{\text{amb}}$ , the operating pressure  $P_{\text{medium}}$ , the liner material and the approvals for the explosion protection.

#### Maximum permissible cleaning temperature

CIP medium	Liner material	Cleaning temperature
Steam	PTFE, PFA	150 °C (302 °F)
Cleaning fluid	PTFE, PFA	140 °C (284 °F)

- The specified cleaning temperature applies for a maximum ambient temperature of 25 °C (77 °F). If the ambient temperature is > 25 °C (> 77 °F), the difference to the actual ambient temperature must be subtracted from the maximum cleaning temperature.
- The specified cleaning temperature may be applied for a maximum of 60 minutes.

**Ambient temperature as a function of measuring medium temperature****Integral mount design**

## Process connections

For an overview of the available process connection variants, see the chapter entitled "Overview – models" on page 8.

## Installation length

The flange devices comply with the installation lengths specified in ISO 13359.

For further details, refer to chapter "Dimensions" on page 27.

## Materials

### Wetted parts

Part	Standard	Option
Liner material	PTFE, PFA, ETFE, hard rubber, soft rubber	Ceramic Carbide, Linatex
<b>Measurement and grounding electrode for liner material</b>		
• Hard rubber	SST 1.4571 (AISI 316Ti)	Hastelloy B-3 (2.4600), Hastelloy C-4 (2.4610), titanium, Tantalum, Platinum-Iridium, SST 1.4539 (AISI 904L)
— Soft rubber		
• PTFE, PFA, ETFE	SST 1.4539 (AISI 904L)	SST 1.4571 (AISI 316Ti), Hastelloy B-3 (2.4600), Hastelloy C-4 (2.4610), Titanium, Tantalum, Platinum-Iridium
Grounding ring	Stainless steel	On request
Protection plate	Stainless steel	On request

### Non-wetted parts (process connection), Design level "A"

DN 3 ... 15 (1/10 ... 1/2")	Stainless steel <sup>1)</sup>	-
DN 20 ... 400 (3/4 ... 16")	Steel (galvanized) <sup>2)</sup>	Stainless steel <sup>1)</sup>
DN 450 ... 2000 (18 ... 80")	Steel (painted) <sup>2)</sup>	-

### Non-wetted parts (process connection), Design level "B"

DN 25 ... 300 (1 ... 12")	Steel (painted) <sup>2)</sup>	-
	Cast Iron (painted) <sup>3)</sup>	

The process connections are made of one of the materials listed below:

1) 1.4301 (AISI 304), 1.4307, 1.4404 (AISI 316L) 1.4435 (AISI 316L), 1.4541 (AISI 321) 1.4571 (AISI 316Ti)

2) 1.0038, 1.0460, 1.0570, 1.0432, ASTM A105, Q255A, 20#, 16Mn

3) EN-JS1025 (5.3103)

## ... Flowmeter sensor

### Sensor housing, Design level "A"

Part / DN	Material
<b>Housing</b>	
DN 3 ... 400 (1/10 ... 16")	Cast aluminum (painted) Paint coat: ≥ 80 µm thick, RAL 9002
DN 450 ... 2000 (18 ... 80")	Welded steel design (painted) Paint coat: ≥ 80 µm thick, RAL 9002
<b>Meter tube</b>	Stainless steel <sup>4)</sup>
<b>Terminal box</b>	Aluminum alloy, painted, ≥ 80 µm thick, light gray, RAL 9002 Option: Plastic, gray white, RAL 9002 Option: Stainless Steel
<b>Cable gland<sup>5)</sup></b>	Polyamide, stainless Steel <sup>6)</sup>

### Sensor housing, Design level "B"

Part / DN	Material
<b>Housing / meter tube</b>	Steel (painted), cast Iron (painted) <sup>3)</sup> Paint coat: ≥ 80 µm thick, RAL 9002
DN 25 ... 300 (1 ... 12")	
<b>Terminal box</b>	Aluminum alloy, painted, ≥ 80 µm thick, light gray, RAL 9002 Option: Plastic, gray white, RAL 9002 Option: Stainless Steel
<b>Cable gland<sup>5)</sup></b>	Polyamide, stainless Steel <sup>6)</sup>

The meter tube is made of one of the materials listed below:

3) EN-151025 (5.3103)

4) 1.4301, 1.4307, 1.4404, 1.4435, 1.4541, 1.4571

ASTM materials:

Grade TP304, TP304L, TP316L, TP321, TP316Ti, TP317L, 0Cr18Ni9, 00Cr18Ni10, 0CR17Ni14Mo2, 0Cr27Ni12Mo3, 0Cr18Ni10Ti

5) Cable gland with M 20 x 1.5 or NPT thread, to be selected via the order number.

6) In the case of explosion-proof design or for ambient temperature of 40 °C (40 °F).

### Material loads for process connections

The limits for the permissible measuring medium temperature ( $T_{medium}$ ) and permissible pressure ( $P_{medium}$ ) are calculated on the basis of the lining and flange material used in the device (refer to the name plate on the device).

### Minimum permissible operating pressure

The following tables show the minimum permissible operating pressure ( $P_{medium}$ ) depending on measuring medium temperature ( $T_{medium}$ ) and the liner material.

### Design level "A"

Liner material	Nominal diameter	$P_{medium}$ [mbar abs]	$T_{medium}$ <sup>1)</sup>
Hard rubber	DN 25 ... 2000 (1 ... 80")	0	< 85 °C (185 °F)
			< 80 °C (176 °F) <sup>2)</sup>
Soft rubber	DN 50 ... 2000 (2 ... 80")	0	< 60 °C (140 °F)
		270	< 20 °C (68 °F)
		400	< 100 °C (212 °F)
PTFE	DN 10 ... 600 (3/8 ... 24")	500	< 130 °C (266 °F)
		0	< 180 °C (356 °F)
		67	< 180 °C (356 °F)
Thick PTFE	DN 25 ... 80 (1 ... 3")	27	< 180 °C (356 °F)
		100	< 130 °C (266 °F)
		100	< 180 °C (356 °F)
PFA	DN 3 ... 200 (1/10 ... 8")	0	< 180 °C (356 °F)
ETFE	DN 25 ... 600 (1 ... 24")	0	< 180 °C (356 °F)
		0	< 80 °C (176 °F)
Ceramic Carbide	DN 25 ... 1000 (1 ... 40")	0	< 80 °C (176 °F)
Linatex <sup>2)</sup>	DN 50 ... 600 (6 ... 24")	0	< 70 °C (158 °F)

1) For CIP/SIP cleaning, higher temperatures are permitted for limited time periods;  
refer to the chapter "Maximum permissible cleaning temperature" on page 12.

2) For China production site only.

**Design level "B"**

Liner material	Nominal diameter	P <sub>medium</sub> [mbar abs]	T <sub>medium</sub> <sup>1)</sup>
PTFE	DN 25 ... 300 (1 ... 12")	270	< 20 °C (68 °F)
		400	< 100 °C (212 °F)
		500	< 130 °C (266 °F)

1) For CIP/SIP cleaning, higher temperatures are permitted for limited time periods; refer to the chapter "Maximum permissible cleaning temperature" on page 12.

Liner approvals on request; please contact ABB.

**Overview sensor design level "B"**

## ... Flowmeter sensor

### Flowmeter sensor design level "A"

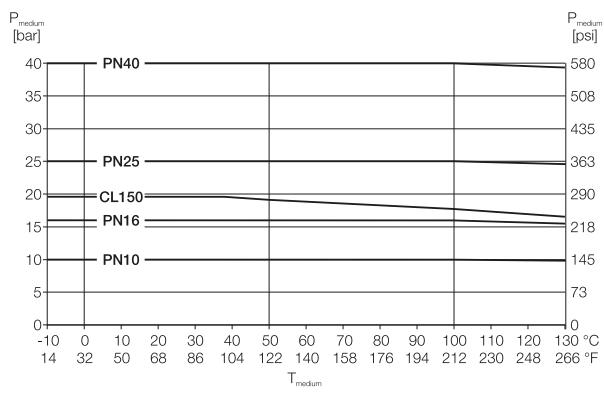

Fig. 14: Cast iron housing, DN 25 ... 600 (1 ... 24"); design level "B"

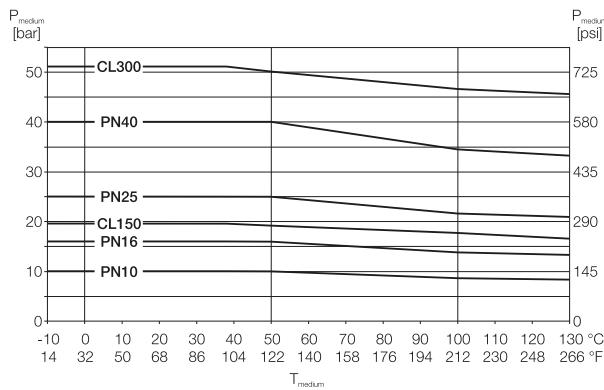

Fig. 15: Welded steel housing, DN 25 ... 600 (1 ... 24"); design level "B"

### Installation conditions

#### General information

The following points must be observed during installation:

- The flow direction must correspond to the marking, if present.
- The maximum torque for all flange screws must be complied with.
- Secure the flange screws and nuts against pipe vibration.
- The devices must be installed without mechanical tension (torsion, bending).
- Install flange devices / wafer-type devices with plane parallel counterflanges and use appropriate gaskets only.
- Only gaskets made from a material that is compatible with the measuring medium and measuring medium temperature may be used.
- Gaskets must not extend into the flow area, since possible turbulence could influence the accuracy of the device.
- The piping may not exert any inadmissible forces or torques on the device.
- Make sure temperature limits are not exceeded operating the device.
- Vacuum shocks in the piping should be avoided to prevent damage to the liners (PTFE). Vacuum shocks can destroy the device.
- Do not remove the sealing plugs in the cable glands until you are ready to install the electrical cable.
- Make sure the gaskets for the housing cover are seated correctly. Carefully gasket the cover. Tighten the cover fittings.
- The transmitter with a remote mount design must be installed at a largely vibration-free location.
- Do not expose the transmitter and sensor to direct sunlight. Provide appropriate sun protection as necessary.
- When installing the transmitter in a control cabinet, make sure adequate cooling is provided.

### Devices with extended diagnostic functions

For devices with extended diagnostic functions different installation conditions may be valid.

For further information read and observe chapter "Diagnostic functions" on page 5.

### Brackets and supports

#### NOTICE – Potential damage to device!

Improper support for the device may result in deformed housing and damage to internal magnet coils.

Place the supports at the edge of the flowmeter sensor housing (see arrows in Fig. 1).

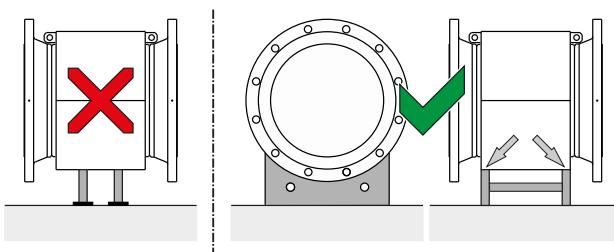

Fig. 1: Support for meter sizes larger than DN 400

Devices with meter sizes larger than DN 400 must be mounted with support on a sufficiently strong foundation.

### Gaskets

The following points must be observed when installing gaskets:

- For achieve the best results, ensure the gaskets fit concentrically with the meter tube
- To ensure that the flow profile is not distorted, the gaskets must not protrude into the piping.
- The use of graphite with the flange or process connection gaskets is prohibited, because an electrically conductive coating may form on the inside of the meter tube.

### Devices with a hard rubber, soft rubber liner

- Devices with a hard / soft rubber liner always require additional gaskets.
- ABB recommends using gaskets made from rubber or rubber-like sealing materials.
- When selecting the gaskets, ensure that the tightening torques specified in chapter are not exceeded.

### Devices with a PTFE, PFA or ETFE liner

- Devices with a PTFE, PFA or ETFE liner do not require additional gaskets.

### Flow direction

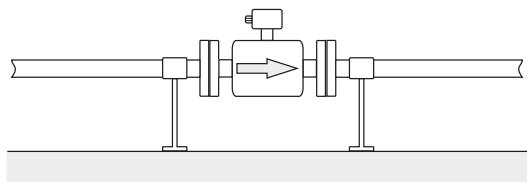

Fig. 2: Flow direction

The device measures the flowrate in both directions. Forward flow is the factory setting, as shown in Fig. 2.

### Elektrode axis

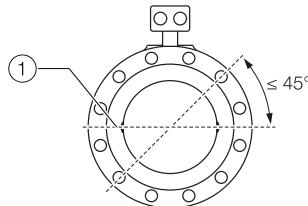

Fig. 16: Orientation of the electrode axis

The electrode axis ① should be horizontal if at all possible or no more than 45° from horizontal.

## ... Flowmeter sensor

### Mounting position

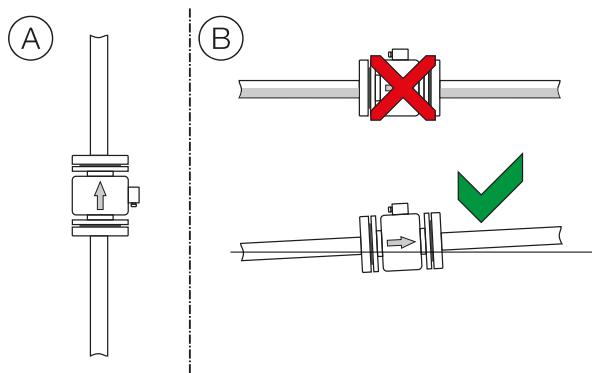

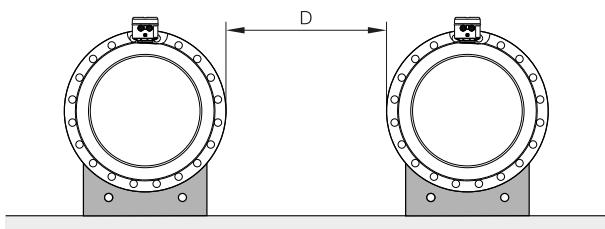

Fig. 17: Mounting position

- Ⓐ Vertical installation for measuring abrasive fluids, preferably with flow in upward direction.
- Ⓑ In case of horizontal installation, the Meter tube must always be completely full. Provide for a slight incline of the connection for degassing.

### Minimum distance

Distance D:  $\geq 1.0 \text{ m (3.3 ft)}$  for design level "A",  $\geq 0.7 \text{ m (2.3 ft)}$  for design level "B"

Fig. 3: Minimum distance

- In order to prevent the devices from interfering with each other, a minimum distance as shown in Fig. 3 must be maintained between the devices.
- The flowmeter sensor may not be operated in the vicinity of powerful electromagnetic fields, e.g., motors, pumps, transformers, etc. A minimum spacing of approx. 1 m (3.28 ft) should be maintained.
- For installation on or to steel parts (e.g. steel brackets), a minimum spacing of approx. 100 mm (3.94 inch) should be maintained (based on IEC801-2 and IECTC77B).

### Inlet and outlet sections

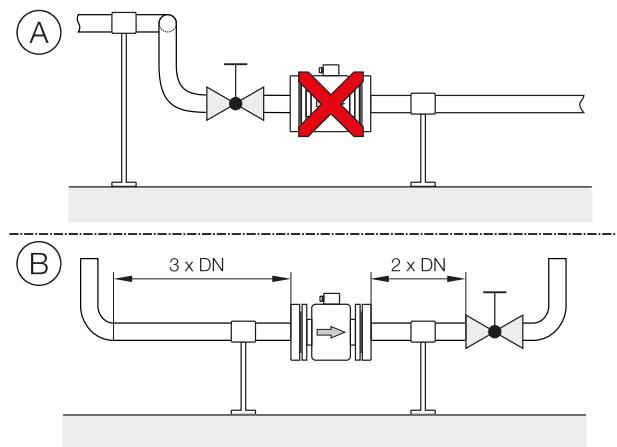

Fig. 18: In- and outlet section, turn-off component

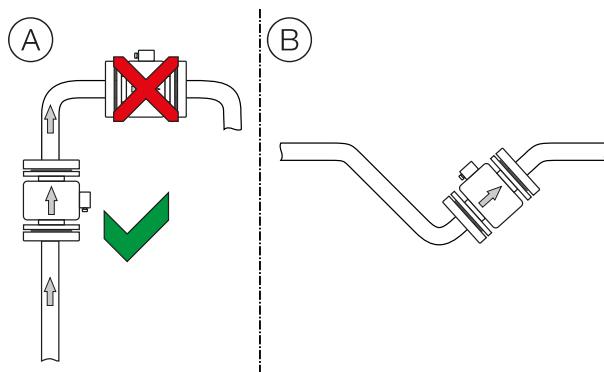

Pos.	Description
①	Double elbow
②	Turn-off device

Table 16: Legend

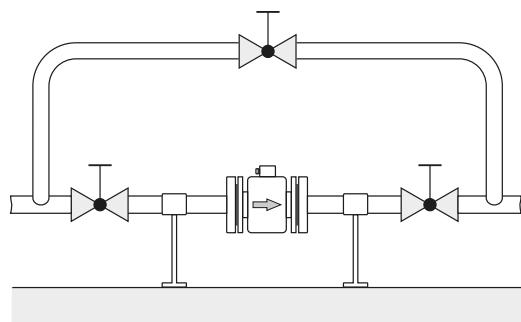

The metering principle is independent of the flow profile as long as standing eddies do not extend into the metering section, such as may occur after double elbows, in the event of tangential inflow, or where half-open gate valves are located upstream of the flowmeter sensor.

In such cases, measures must be put in place to normalize the flow profile.

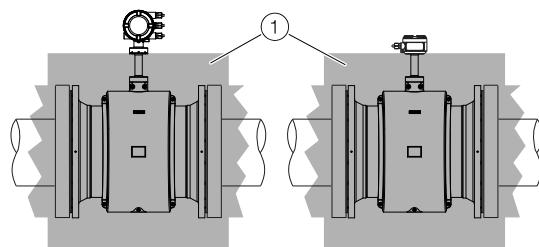

- Ⓐ Do not install fittings, manifolds, valves, etc., directly in front of the flowmeter sensor.
- Ⓑ Inlet and outlet section: Length of straight inlet and outlet section of the flowmeter sensor. Experience has shown that, in most installations, inlet sections 3 x DN long and outlet sections 2 x DN long are sufficient (DN = nominal diameter of the flowmeter sensor). For test stands, the reference conditions of 10 x DN inlet section and 5 x DN outlet section must be provided, in accordance with EN 29104 / ISO 9104. Valves or other turn-off components should be installed in the outlet section. Butterfly valves must be installed so that the valve plate does not extend into the flowmeter sensor.

**Free inlet or outlet****Fig. 19: Free inlet or outlet**

- Ⓐ Do not install the flowmeter at the highest point or in the draining off side of the pipeline, flowmeter runs empty, air bubbles can form.
- Ⓑ Provide for a siphon fluid intake for free inlets or outlets so that the pipeline is always full.

**Strongly contaminated measuring media****Fig. 4: Bypass connection**

For strongly contaminated measuring media, a bypass connection according to the figure is recommended so that operation of the system can continue to run without interruption during the mechanical cleaning.

**Sensor insulation****Fig. 20: Insulation of the flowmeter sensor**

The high temperature design allows for complete thermal insulation of the flowmeter sensor. The pipeline and sensor must be insulated ① after installing the unit according to the illustration.

**Grounding**

The flowmeter sensor must be connected to ground potential. For technical reasons, this potential should be identical to the potential of the measuring medium. For plastic or insulated lined pipelines, the measuring medium is grounded by installing ground plates. When there are stray potentials present in the pipeline, a ground plate is recommended on both ends of the flowmeter sensor.

## ... Flowmeter sensor

### Installation in the vicinity of pumps

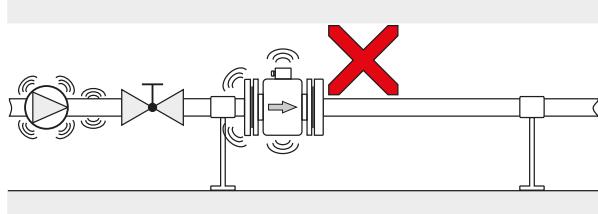

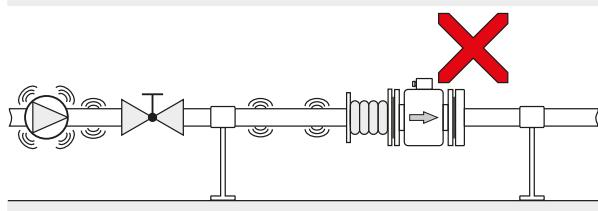

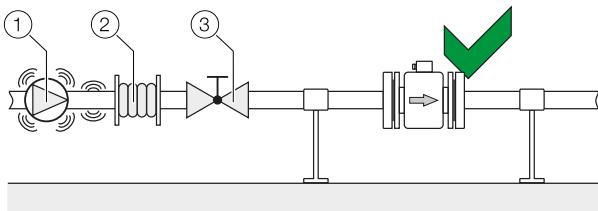

Fig. 21: Vibration damping

Pos.	Description
①	Pump
②	Damping device
③	Shut-off device

Table 17: Legend

Strong vibrations in the pipeline must be damped using flexible damping devices.

The damping devices must be installed beyond the supported flowmeter section and outside of the section between the shut-off devices.

Do not connect flexible damping devices directly to the flowmeter sensor.

### Installation in pipelines with larger nominal diameters

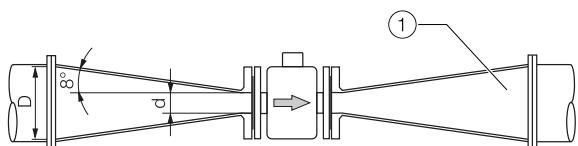

Fig. 22: Using reduction pieces

Determine the resulting pressure loss when using transition pieces ①:

1. Calculate the diameter ratio  $d/D$ .
2. Determine the flow velocity based on the flow rate nomogram (Fig. 5).
3. Read the pressure drop on the Y-axis in Fig. 5.

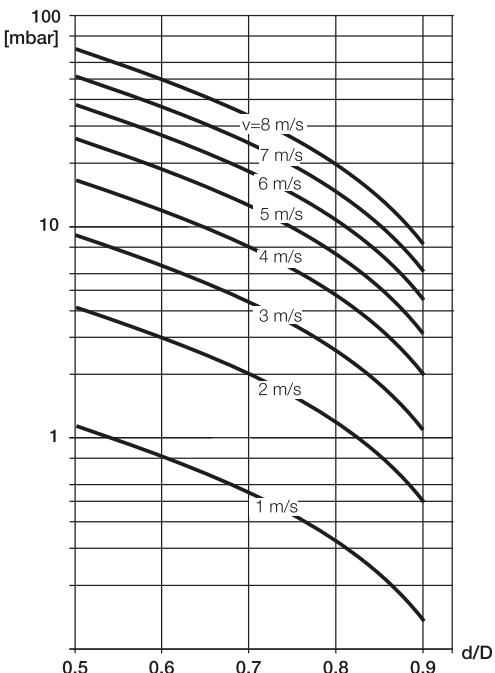

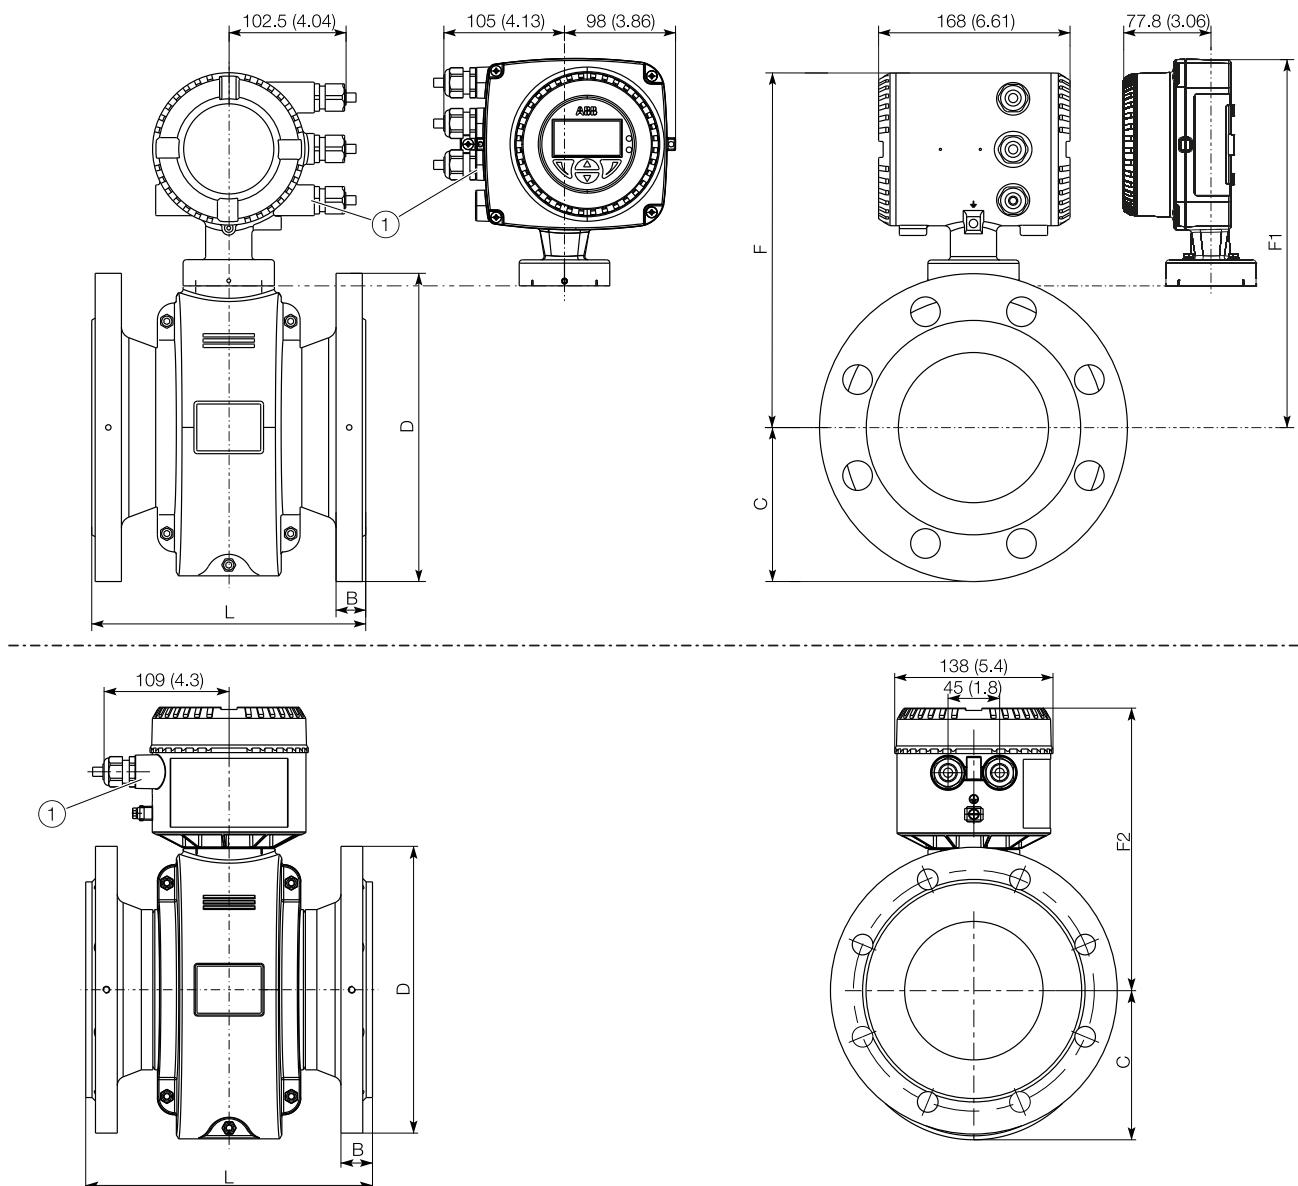

Fig. 5: Flow rate nomogram for pressure drop calculations for flange transition piece with  $\alpha/2 = 8^\circ$

## Dimensions

### Flange DN 3 ... 100 (1/10 ... 4"), aluminum sensor housing (shell housing) — Design level "A"

All specified dimensions and weights are in mm (inch) or kg (lb). The stated weights are approximate; the maximum weight is always stated.

**Integral mount design**

**Integral mount design**

- ① Female thread (either 1/2" NPT or M20 x 1,5) refer to model coding. With 1/2" NPT there will be a plug instead of the PG cable inlet.

Fig. 23

Table 19: Dimensions DN 50 ... 100

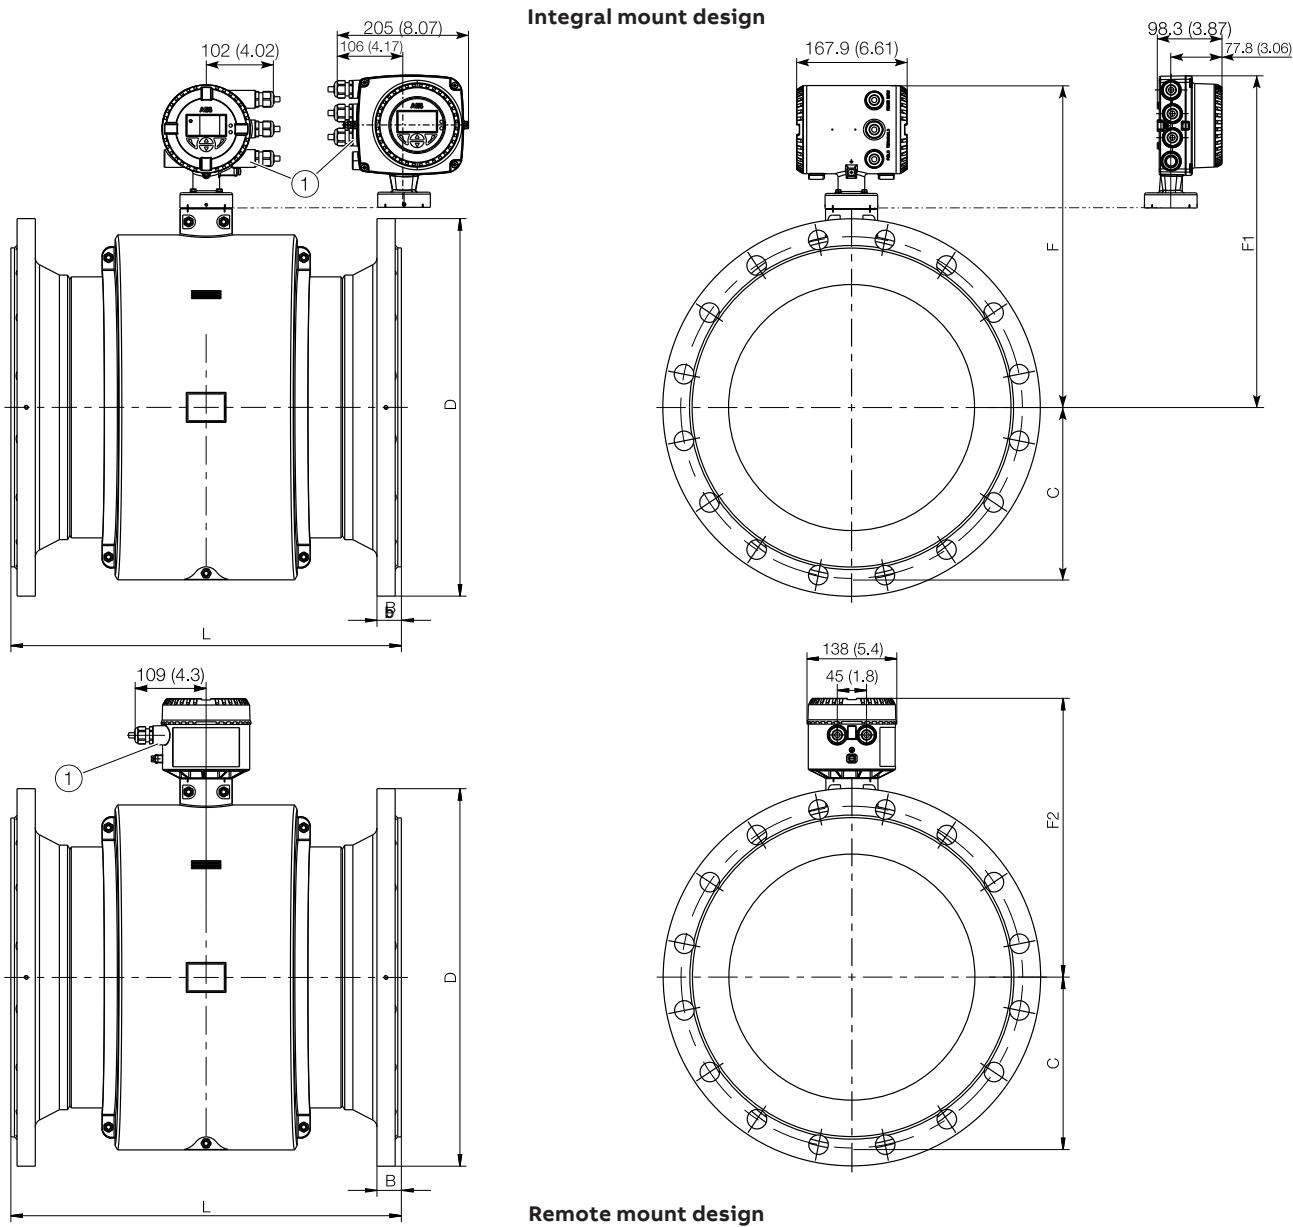

Tolerance for L: +0 / -3 mm (+0 / -0,018 in.)

- 1) Other pressure ratings on request.  
 2) If a grounding ring is fitted (attached to one side of the flange), dimension L increases as follows: by 3 mm (0.118 inch) for DN 3 ... 100, and by 5 mm (0.197 inch) for DN 125.  
 3) If protection plates are fitted (attached to both sides of the flange), dimension L increases as follows:  
    by 6 mm (0.236 inch) for DN 3 ... 100, and by 10 mm (0.394 inch) for DN 125.  
 4) Connection flange DN 10.  
 5) Connection flange 1/2".  
 6) Connecting dimensions in accordance with EN 1092-1. For DN 65, PN 16 in accordance with EN 1092-1, please order PN 40.  
 7) For devices in high-temperature design, dimension F, F1, F2 increases by +127 mm (+5.0 inch).

## ... Flowmeter sensor

### Flange DN 125 ... 400 (6 ... 16"), aluminum sensor housing (shell housing) — Design level "A"

All specified dimensions and weights are in mm (in.) or kg (lb.). The stated weights are approximate; the maximum weight is always stated.

① Female thread (either 1/2" NPT or M20 x 1,5) refer to model coding. With 1/2" NPT there will be a plug instead of the PG cable inlet.

Tolerance for L: +0 / -3 mm (+0 / -0.018 in.)

- 1) Other pressure ratings on request.  
 2) If a grounding ring is fitted (attached to one side of the flange), dimension L increases by 5 mm (0.197 in.).  
 3) If protection plates are fitted (attached to both sides of the flange), dimension L increases by 10 mm (0.394 in.).  
 4) For devices in high-temperature design, dimension F, F1, F2 increases by +127 mm (+5.0 in.).

## ... Flowmeter sensor

### Flange DN 150 ... 600 (1 ... 24"), cast iron sensor housing – Design level "B"

All specified dimensions and weights are in mm (in.) or kg (lb). The stated weights are approximate; the maximum weight is always stated.

**Integral mount design**

**Remote mount design**

① Transport lugs

② Female thread (either 1/2" NPT or M20 x 1,5) refer to model coding. With 1/2" NPT there will be a plug instead of the PG cable inlet.

Table 25: Dimensions DN 150 ... 300 (6 ... 12")

Tolerance for L: DN 150 ... 200 +0 / -3 mm (+0 / -0,018 in.), DN 250 ... 300 +0 / -5 mm (+0 / -0,197 in.)

1) Other pressure ratings on request.

2) If a grounding ring is fitted (attached to one side of the flange), dimension L increases by 5 mm (0.197 in.).

3) If protection plates are fitted (attached to both sides of the flange), dimension L increases by 10 mm (0.394 in.).

4) For devices in high-temperature design, dimension F, F1, F2 increases by +127 mm (+5.0 in.).

## Transmitter

### Features

- 4 ... 20 mA current output
- Current output in the event of an alarm can be configured to 21 ... 22.6 mA (NAMUR NE43)
- Measuring range: Can be configured between 0.02 ... 2 x  $Q_{\max}$  DN
- Operating mode for flow measurement can be configured
- Programmable digital output. Can be configured as frequency output, pulse output or binary output.
- Two slots for optional plug-in cards for retrofitting additional current / digital outputs or a digital input.
- Damping: 0.04 ... 100 s configurable ( $1 \tau$ )
- Low flow cut-off: 0 ... 20 % for current and pulse output
- Parameterization by means of HART communication
- Empty pipe detection<sup>1)</sup>
- Simulation of current and binary output (manual process execution)

1) Requirements for Empty Pipe detector function:

The conductivity of the fluid must be  $\geq 20 \mu\text{S}/\text{cm}$   
Nominal diameter must be  $\geq \text{DN } 10$

### LCD indicator (option)

- High-contrast LCD indicator
- Display of the current flow rate as well as the total flow rate
- Application-specific visualizations which the user can select. Two operator pages can be configured to display multiple values in parallel.
- Plain text fault diagnostics
- Menu-guided parameterization with four buttons
- "Easy Set-up" function for fast commissioning
- Parameterization of the device through the front glass with the housing closed

### Isolation of outputs

The digital output terminals 41 / 42 and 51 / 52 have a common ground.  
The current output and the digital outputs are electrically isolated from each other.

### Optional plug-in cards

The transmitter has two slots (OC1, OC2) in which plug-in cards can be inserted to provide additional inputs and outputs.

The slots are located on the transmitter motherboard and can be accessed after removing the front housing cover.

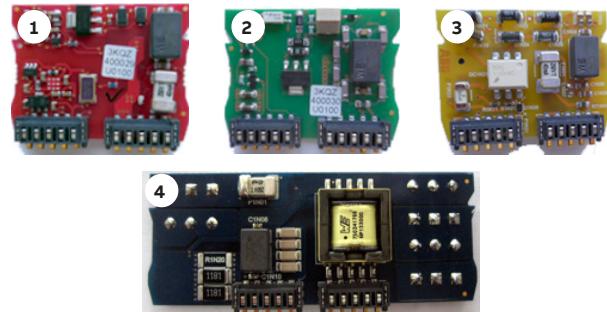

Fig. 28: Optional plug-in cards

Plug-in card	Number <sup>1)</sup>
① Passive current output, 4 ... 20 mA (red) Order no. 3KQZ400029U0100	2
② Passive digital output (green) Order no. 3KQZ400030U0100	1
③ Passive digital input (yellow) 3KQZ400032U0100	1
④ 24 V DC power supply (blue) 3KQZ400031U0100	1

Table 26: Available plug-in cards

1) The "Number" column indicates the maximum number of plug-in cards of the same type that can be used.

### NOTICE

For an overview of possible plug-in card combinations, please refer to chapter "Optional plug-in cards" on page 40.

**IP rating**

In accordance with EN60529: IP 65 / IP 67, NEMA 4X

**Vibration**

In accordance with EN 60068-2

- In the 10 ... 58 Hz range, max. deflection 0.15 mm (0.006 inch)<sup>1)</sup>
- In the range of 58 ... 150 Hz, max. acceleration 2 g<sup>1)</sup>

<sup>1)</sup> Peak load

**Temperature data**

	<b>Standard</b>	<b>Optional</b>
Ambient temperature	-20 ... 70 °C (-4 ... 158 °F)	-40 ... 70 °C (-40 ... 158 °F)
Storage temperature	-40 ... 70 °C (-40 ... 158 °F)	-

**NOTICE**

When operating below -20 °C (-4 °F), the LCD display can no longer be read. Full functionality is assured at temperatures above -20 °C (-4 °F).

**Housing design****Integral mount design**

Housing	Cast aluminum, painted
Paint	≥ 80 µm thick, RAL 9002 (gray white)
Cable gland <sup>1)</sup>	Polyamide
	Stainless steel <sup>2)</sup>

**Remote mount design**

Housing	Cast aluminum, painted
Paint	≥ 80 µm thick, RAL 9002 (gray white)
Cable gland <sup>1)</sup>	Polyamide
	Stainless steel <sup>2)</sup>
Weight	4.5 kg (9.92 lb)

1) Cable gland with M 20 x 1.5 or NPT thread, to be selected via the order number.  
2) On explosion-proof design for ambient temperature of -40 °C (-40 °F).

## Transmitter

### Dimensions

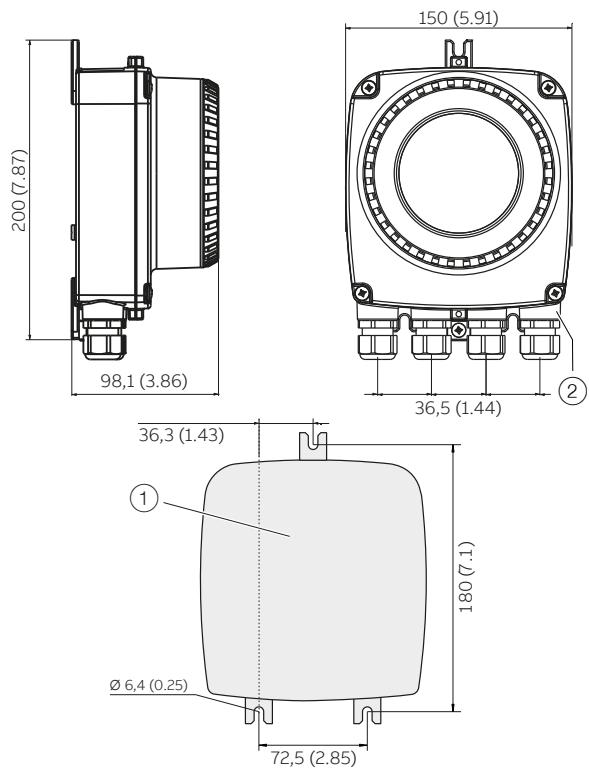

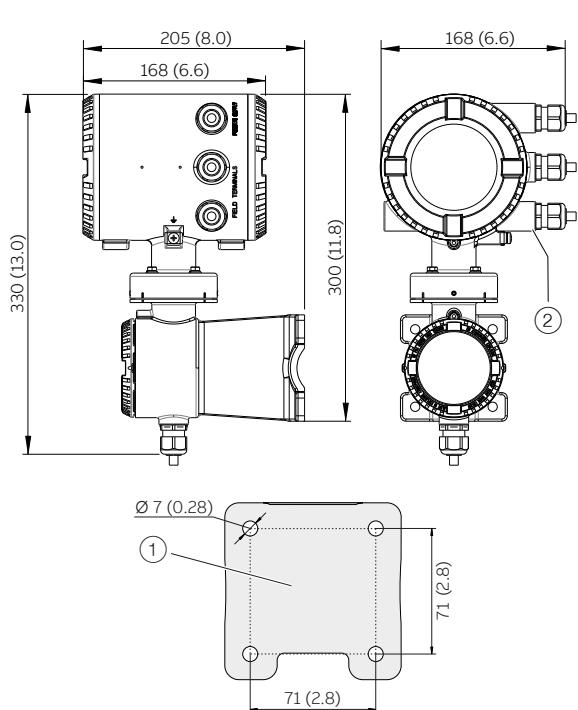

Table 27: Legend

Pos.	Description
(1)	Hole pattern for mounting holes
(2)	Female thread (either 1/2" NPT or M20 x 1,5) refer to model coding. With 1/2" NPT there will be a plug instead of the PG cable inlet.

Table 28: Legend

Pos.	Description
(1)	Hole pattern for mounting holes
(2)	Female thread (either 1/2" NPT or M20 x 1,5) refer to model coding. With 1/2" NPT there will be a plug instead of the PG cable inlet

## Electrical connections

### Connection diagram

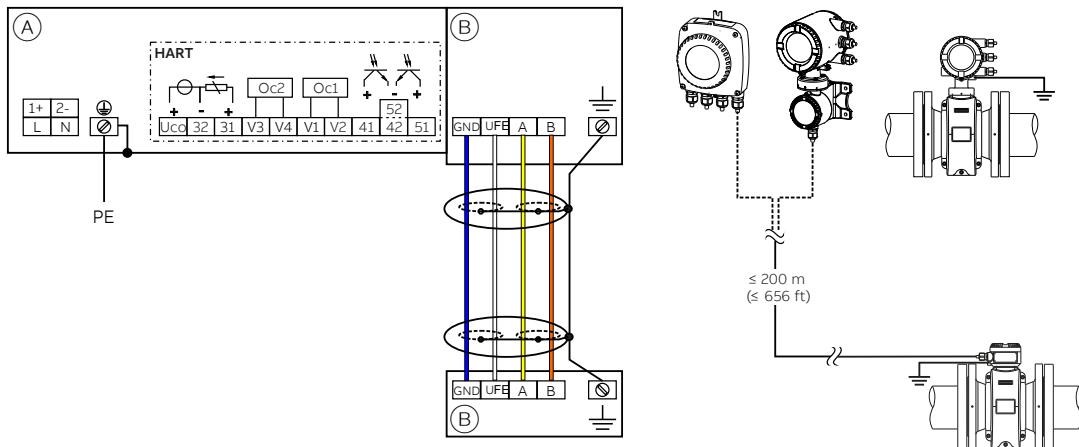

Fig. 31: Electrical connections

Pos.	Description
①	Connections for power supply and inputs / outputs
②	Connections for signal cable (remote mount design only)

Table 29: Legend

#### NOTICE

For detailed information about grounding the transmitter and the flowmeter sensor, please refer to chapter "Grounding" in the Commissioning instruction or the operating instruction.

#### Connections for the power supply

##### AC voltage

Terminal	Function / comments
L	Phase
N	Neutral conductor
PE / ⊕	Protective earth (PE)
▽	Potential equalization

##### AC voltage

Terminal	Function / comments
1+	+
2-	-
PE / ⊕	Protective earth (PE)
▽	Potential equalization

#### Connections for inputs and outputs

Terminal	Function / comments
Uco / 32	Active 4 ... 20 mA current output / HART or
31 / 32	Passive 4 ... 20 mA current output / HART
41 / 42	Passive digital output DO1
51 / 52	Passive digital output DO2
V1 / V2	Plug-in card, slot Oc1
V3 / V4	Plug-in card, slot Oc2
	For details, see chapter "Optional plug-in cards" on page 40.

#### Connecting the signal cable

Only for remote mount design.  
The sensor housing and transmitter housing must be connected to potential equalization.

##### Terminal Function / comments

UFE	Sensor power supply
GND	Ground
A	Data line
B	Data line
	Functional earth / Shielding

## ... Electrical connections

### Electrical data for inputs and outputs

#### Power supply

##### AC power supply

Terminals	L / N
Operating voltage	100 ... 240 V AC (-15 % / +10 %), 47 ... 64 Hz
Power consumption	Smax: < 20 VA
Switch-on current	18.4 A, t < 3 ms

##### DC voltage supply

Terminals	1+ / 2-
Operating voltage	16.8 ... 30 V DC
Ripple	< 5 %
Power consumption	P <sub>max</sub> : < 20 W
Switch-on current	21 A, t < 10 ms

#### HART communication

A HART DTM in accordance with FDT1.2 standards is available. HART protocol based Integrations in other Tools or systems (e.g., Emerson AMS/Siemens PCS7) are available on request. The DTM, the DD and EDD is available for download from [www.abb.com/flow](http://www.abb.com/flow).

##### HART output

Terminals	Active: U <sub>co</sub> / 32 Passive: 31 / 32
Protocol	HART 7.1
Transmission	FSK modulation on current output 4 ... 20 mA in accordance with Bell 202 standard
Baud rate	1200 baud
Signal amplitude	Maximum 1.2 mAss
Current output load	Minimum 250 Ω
Cable	0,25 mm <sup>2</sup> (AWG 24), twisted
Maximum cable length	1200 m (3937 ft)

#### Current output U<sub>co</sub> / 32, 31 / 32

Can be configured for outputting mass flow and volume flow.

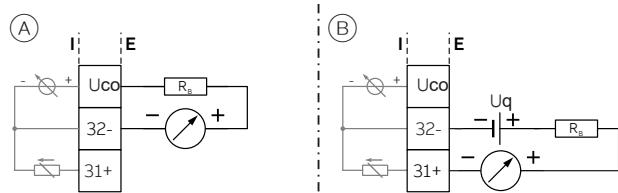

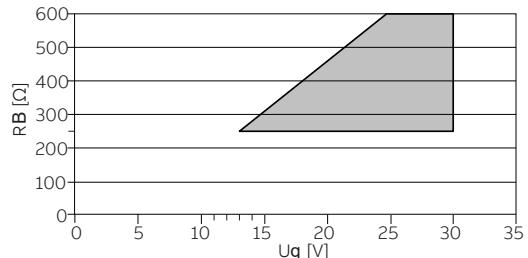

Fig. 32: (I = internal, E = external, R<sub>B</sub> = load, U<sub>q</sub> = Source voltage)

(A) Active current output U<sub>co</sub> / 32

(B) Passive current output 31 / 32

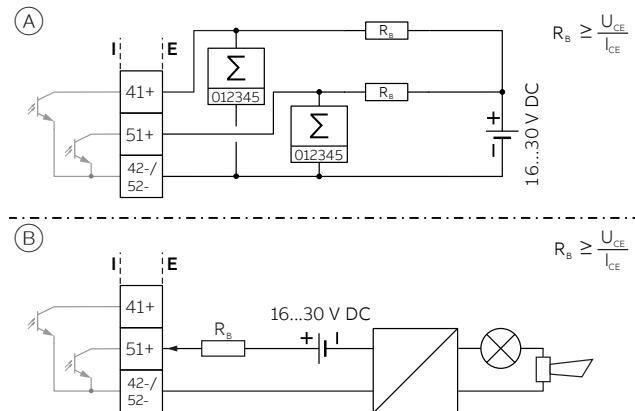

Permissible source voltage U<sub>q</sub> for passive outputs in relation to load resistance where I<sub>max</sub> = 22 mA. █ = Permissible range

Fig. 33: Source voltage for passive outputs

	Active	Passive
Terminals	U <sub>co</sub> / 32	31 / 32
Output signal	4 ... 20 mA or 4 ... 12 ... 20 mA, switchable	4 ... 20 mA
Load R <sub>B</sub>	250 Ω ≤ R <sub>B</sub> ≤ 300 Ω	250 Ω ≤ R <sub>B</sub> ≤ 600 Ω
Source voltage U <sub>q</sub> <sup>1)</sup>	•	13 V ≤ U <sub>q</sub> ≤ 30 V
Measuring error	< 0.1 % of measured value	
Isolation	The current output and the digital outputs are electrically isolated from each other.	

Table 30: Electrical data current output U<sub>co</sub> / 32, 31 / 32

1) The source voltage U<sub>q</sub> depends on the load R<sub>B</sub> and must be within the permissible range.

**Digital output 41 / 42, 51 / 52**Fig. 34: (I = internal, E = external,  $R_B$  = load)

- (A) Passive digital output 41 / 42, 51 / 52 as pulse or frequency output  
(B) Passive digital output 51 / 52 as binary output

**Pulse / frequency output (passive)**

Terminals	41 / 42, 51 / 52
Output "closed"	$0 \text{ V} \leq U_{CEH} \leq 3 \text{ V}$ For $f < 2.5 \text{ kHz}$ : $2 \text{ mA} < I_{CEH} < 30 \text{ mA}$ For $f > 2.5 \text{ kHz}$ : $10 \text{ mA} < I_{CEH} < 30 \text{ mA}$
Output "open"	$16 \text{ V} \leq U_{CEH} \leq 30 \text{ V DC}$ $0 \text{ mA} \leq I_{CEH} \leq 0.2 \text{ mA}$
$f_{\max}$	10.5 kHz
Pulse width	0.1 ... 2000 ms

**Binary output (passive)**

Terminals	41 / 42, 51 / 52
Output "closed"	$0 \text{ V} \leq U_{CEH} \leq 3 \text{ V}$ $2 \text{ mA} \leq I_{CEH} \leq 30 \text{ mA}$
Output "open"	$16 \text{ V} \leq U_{CEH} \leq 30 \text{ V DC}$ $0 \text{ mA} \leq I_{CEH} \leq 0.2 \text{ mA}$
Switching function	Configurable

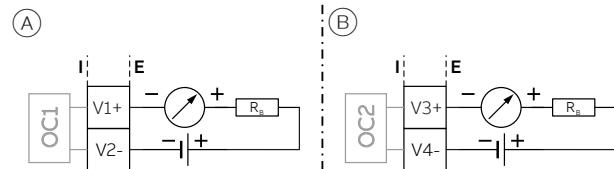

Table 31: Electrical data digital output 41 / 42, 51 / 52

**NOTICE**

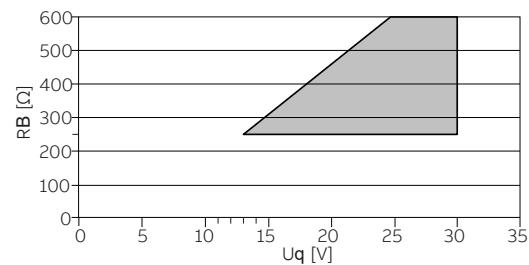

- The Terminals 42 / 52 have a common ground. The Digital outputs 41 / 42 and 51 / 52 are not electrically isolated from each other. An electrically isolated digital output can be realized using a plug-in card.
- For mechanical counters, we recommend setting the pulse width to  $\geq 30 \text{ ms}$  and a maximum frequency of  $f_{\max} \leq 3 \text{ kHz}$ .

**Current output V1 / V2, V3 / V4 (plug-in card)**

Up to two additional current outputs can be implemented via the "Passive current output (red)" plug-in card.  
The plug-in card can be used in slot OC1 or in OC2.

Fig. 35: (I = internal, E = external,  $R_B$  = load)

- (A) Passive current output V1 / V2  
(B) Passive current output V3 / V4

Permissible source voltage  $U_q$  for passive outputs in relation to load resistance where  $I_{\max} = 22 \text{ mA}$ . ■ = Permissible range

Fig. 36: Source voltage for passive outputs

**Passive current output**

Terminals	V1 / V2, V3 / V4
Output signal	4 ... 20 mA
Load $R_B$	$250 \Omega \leq R_B \leq 600 \Omega$
Source voltage	$13 \text{ V} \leq U_q \leq 30 \text{ V}$
Measuring error	< 0.1 % of measured value

Table 32: Electrical data current output V1 / V2, V3 / V4

1) The source voltage  $U_q$  depends on the load  $R_B$  and must be within the permissible range.

## ... Electrical connections

### Digital output V1 / V2, V3 / V4 (plug-in card)

An additional binary output can be implemented via the "Passive digital output (green)" plug-in card. The plug-in card can be used in slot OC1 or in OC2.

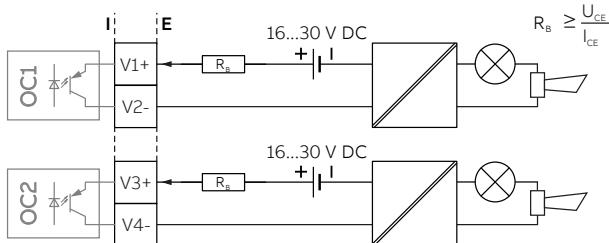

Fig. 37: Plug-in card as binary output (I = internal, E = external,  $R_b$  = load)

#### Binary output (passive)

Terminals	V1 / V2, V3 / V4
Output "closed"	$0 \text{ V} \leq U_{\text{CEL}} \leq 3 \text{ V}$ $2 \text{ mA} < I_{\text{CEL}} < 30 \text{ mA}$
Output "open"	$16 \text{ V} \leq U_{\text{CEH}} \leq 30 \text{ V DC}$ $0 \text{ mA} \leq I_{\text{CEH}} \leq 0.2 \text{ mA}$
Switching function	Configurable

Table 33: Electrical data digital output V1 / V2, V3 / V4

### Digital input V1 / V2, V3 / V4 (plug-in card)

A digital input can be implemented via the "Passive digital input (yellow)" plug-in card. The plug-in card can be used in slot OC1 or in OC2.

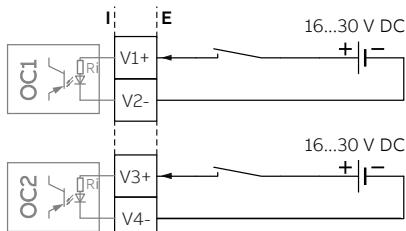

Fig. 38: Plug-in card as digital input (I = internal, E = external)

#### Digital input

Terminals	V1 / V2, V3 / V4
Input "On"	$16 \text{ V} \leq UKL \leq 30 \text{ V}$
Input "Off"	$0 \text{ V} \leq UKL \leq 3 \text{ V}$
Internal resistance	$R_i = 6.5 \text{ k}\Omega$
Function	Configurable

Table 34: Electrical data digital input V1 / V2, V3 / V4

### 24 V DC power supply V1 / V2 (plug-in card)

The power supply plug-in card allows a passive output on the transmitter to be used as an active output. The power supply plug-in card allows a passive output on the transmitter to be used as an active output. See chapter "Connection examples" on page 47.

The plug-in card can only be used in slot OC1.

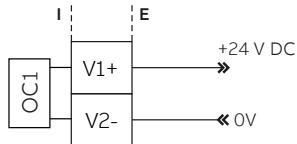

Fig. 39: (I = Internal, E = External)

### 24 V DC power supply

Terminals	V1 / V2
Function	For active connection of passive outputs
Output voltage	24 V DC at 0 mA, 17 V DC at 25 mA
Load rating $I_{\text{max}}$	25 mA, permanently short circuitproof

Table 35: Electrical data plug-in card 24 V DC power supply V1 / V2

### NOTICE

When using the device in potentially explosive atmospheres, the power supply plug-in card must only be used to power one passive output. It must not be connected to multiple passive outputs!

### Connection examples

Input and output functions are configured via the device software in accordance with the desired application.

#### Active digital output 41 / 42, 51 / 52, V3 / V4

When the "24 V DC power supply (blue)" plug-in card is used, the digital outputs on the basic device and on the plug-in cards can also be wired as active digital outputs.

#### NOTICE

Each "power supply (blue)" plug-in card must only power one output.  
It must not be connected to two outputs (e.g. digital output 41 / 42 and 51 / 52)!

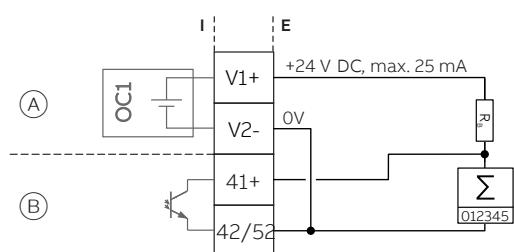

Fig. 40: Active digital output 41 / 42 (example)

- (A) Plug-in card "Power supply (blue)" in slot 1
- (B) Digital output 41 / 42

The connection example shows usage for digital output 41 / 42; the same applies to usage for digital output 51 / 52.

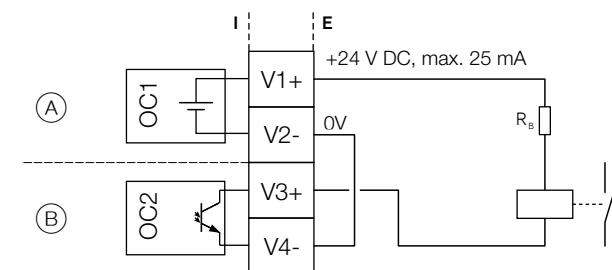

Fig. 41: Active digital output V3 / V4 (example)

- (A) Plug-in card "Power supply (blue)" in slot 1
- (B) Plug-in card "Digital output (green)" in slot 2

#### Digital output 41 / 42, 51 / 52 passive connected to a Process Control System

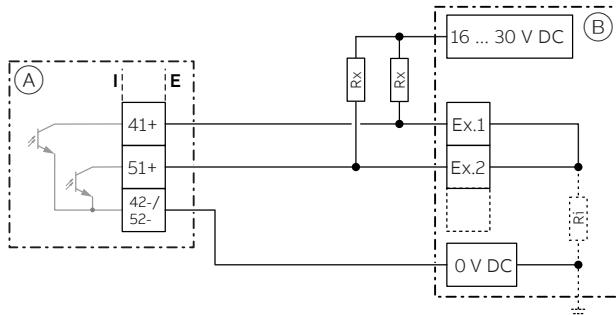

Fig. 42: Digital output 41 / 42, 51 / 52 passive connected to a Process Control System (Example)

Pos.	Description
(A)	Transmitter
(B)	Process Control System
Ex. 1	Input 1
Ex. 1	Input 2
R <sub>x</sub>	Resistor limiting the current
R <sub>i</sub>	Inner Resistor with

Table 36: Legend

Resistor R<sub>x</sub> limits the current of the transmitter's Optocoupler output. The max. current is 25 mA. With 24 V DC voltage R<sub>x</sub> should be 1000 Ω / 1 W. With „1“ (high state) at the digital output of the transmitter, the Input of the Process Control System will switch from 24 V DC to 0 V (low state).

## ... Electrical connections

### Active current output V3 / V4

When the "24 V DC power supply (blue)" plug-in card is used, the current output on the plug-in card can also be wired as the active current output.

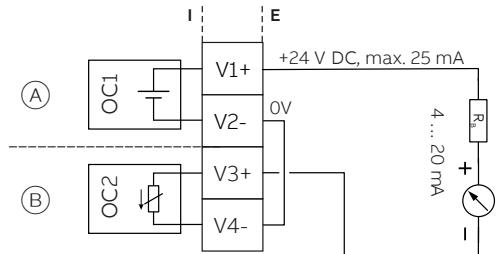

Fig. 43: Active current output V3 / V4 (example)

- (A) Plug-in card "Power supply (blue)" in slot 1
- (B) Plug-in card "Digital output (green)" in slot 2

### Active digital input V3 / V4

When the "24 V DC power supply (blue)" plug-in card is used, the digital input on the plug-in card can also be wired as the active digital input.

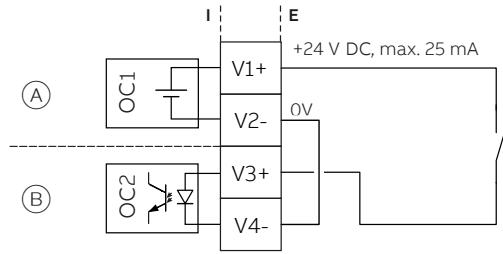

Fig. 44: Active digital input V3 / V4 (example)

- (A) Plug-in card "Power supply (blue)" in slot 1
- (B) Plug-in card "Passive digital input (yellow)" in slot 2

## Ordering Information

**Notes for ProcessMaster FEP631**

- 1) Not available with Single Compartment Housing
- 2) For China production site only.
- 3) Not available with Div1 in conjunction with -40°C
- 4) Not available with Zone 1 / Div 1
- 5) Flange DN 15 ... 600 according to ASME B16.5. Flange > DN 600 according to ASME 16.47 Serie B.
- 6) DN 25 ... DN 200 (1 ... 8 in.) Hard Rubber
- 7) Available from DN 1000 (40 in.)
- 8) Available from DN25-1000. With Tungsten-Carbide electrode only
- 9) Available from DN25-1000
- 10) Available from DN3-200
- 11) Available from DN25
- 12) Available from DN50
- 13) Available from DN10-600
- 14) Available from DN25-300
- 15) Material: Refer to data sheet. Available with Design Level A
- 16) Available from DN10-400
- 17) TFE Electrode for detection of partial filling, available from DN 50 (2 in.)
- 18) Grounding electrodes, material same as measuring electrodes material
- 19) Grounding electrodes, material same as measuring electrodes material TFE Electrode for detection of partial filling, available from DN 50 (2 in.)
- 20) Available with sensor size <= DN 600 (24 in.) and PTFE / Thick-PTFE / ETFE / PFA liner material. For material, refer to data sheet
- 21) Current output (active or passive) can be configured on site
- 22) Will be specified by ABB
- 23) Available with sensor size DN 50 ... DN 600 (2 ... 24 in.) / DN 800 (32 in.) and 5points Calibration
- 24) Not available with size DN 3-8 and > DN900. 0,2% calibration assumes 3 calibration points. If more than 3 calibration points are required, specify 5 points under "Number of test points".
- 25) 2 points calibration is Standard. If more than 2 test points are required, please specify 3 or 5 points with option "Number of Test points". Accuracy = 0.4 % of rate with size > DN 3
- 26) 3 or 5 test points to be specified
- 27) Maximum fluid temperature with standard sensor design:
  - 130 °C (266 °F) with PTFE, PFA, ETFE
  - 80 °C (194 °F / 176 °F) with hard rubber
  - 60 °C (140 °F) with soft rubber
- 28) Max. fluid temperature with high temperature sensor design:
  - 180 °C (356 °F) with PFA, Thick PTFE.
  - 130 °C (266 °F) with ETFE, PTFE liners.

Thick PTFE available for sensor size DN 25 ... DN 300. PFA available for sensor size DN 10 ... DN 200
- 29) Not available with Dakks calibration

### Notes for ProcessMaster FEP632

- 1) For China production site only.
- 2) Flange DN 15 ... 600 according to ASME B16.5. Flange > DN 600 according to ASME 16.47 Serie B.
- 3) DN 25 ... DN 200 (1 ... 8 in.) Hard Rubber
- 4) Available from DN 1000 (40 in.)
- 5) Available from DN25-1000. With Tungsten-Carbide electrode only
- 6) Available from DN25-1000
- 7) Available from DN3-200
- 8) Available from DN25
- 9) Available from DN50
- 10) Available from DN10-600
- 11) Available from DN25-300
- 12) Material: Refer to data sheet. Available with Design Level A
- 13) Available from DN10-400
- 14) TFE Electrode for detection of partial filling, available from DN 50 (2 in.)
- 15) Grounding electrodes, material same as measuring electrodes material
- 16) Grounding electrodes, material same as measuring electrodes material TFE Electrode for detection of partial filling, available from DN 50 (2 in.)
- 17) Available with sensor size <= DN 600 (24 in.) and PTFE / Thick-PTFE / ETFE / PFA liner material. For material, refer to data sheet
- 18) Only available with remote transmitter, sealing compound (optional) D141B038U01
- 19) Only available with remote transmitter
- 20) Will be specified by ABB
- 21) Available with sensor size DN 50 ... DN 600 (2 ... 24 in.) / DN 800 (32 in.) and 5 points Calibration
- 22) 50 Hz (to be specified in case no Tx is ordered)
- 23) 60 Hz (to be specified in case no Tx is ordered)
- 24) Not available with size DN 3-8 and > DN900. 0,2% calibration assumes 3 calibration points. If more than 3 calibration points are required, specify 5 points under "Number of test points".
- 25) 2 points calibration is Standard. If more than 2 testpoints are required, please specify 3 or 5 points with option "Number of Testpoints". Accuracy = 0.4 % of rate with size > DN 3
- 26) 3 or 5 testpoints to be specified
- 27) Max. fluid temperature with standard sensor design:
  - 130 °C (266 °F) with PTFE, PFA, ETFE
  - 80 °C (194 °F / 176 °F) with hard rubber
  - 60 °C (140 °F) with soft rubber
- 28) Max. fluid temperature with high temperature sensor design:
  - 180 °C (356 °F) with PFA, Thick PTFE. Thick PTFE available for sensor size DN 25 ... DN 300. PFA available for sensor size DN 10 ... DN 200
  - 130 °C (266 °F) with ETFE, PTFE liners.
- 29) Not available with Dakks calibration

Field-mount / Single compartment / Aluminum / 4 x M20 x 1.5	3)	F1								
Field-mount / Single compartment / Aluminum / 4 x NPT 1/2 in.	3)	F2								
Wall-mount / Dual compartment / Aluminum / M20 x 1.5 (in preparaton)			W1							
Wall-mount / Dual compartment / Aluminum / NPT 1/2 in. (in preparaton)			W2							
<b>Protection Class Transmitter / Protection Class Sensor</b>										
IP 67 / IP 67			70							
<b>Power Supply</b>										
100 ... 230 V AC, 50 Hz				A						
24 V DC, 50 Hz				D						
100 ... 230 V AC, 60 Hz				C						
24 V DC, 60 Hz				E						
<b>Display</b>										
Without				0						
Display with Keypad				2						
<b>Outputs</b>										
1 Current output (active or passive), 2 Digital Outputs (passive), HART				4)	G0					
<b>Option Card 1</b>										
Without						DR0				
1 x Digital Input						DRN				
1 x Digital Output						DRG				
24 V DC transmitter loop power supply						DRT				
1 x Analog Output passive (4...20mA)						DRA				
<b>Option Card 2</b>										
Without						DS0				
1 x Analog Output passive (4...20mA)						DSA				
1 x Digital Input						DSN				
1 x Digital Output						DSG

Standard design / -40 ... 60 °C (-40 ... 140 °F)						TK4				
<b>Remote Transmitter Mounting Kit</b>										
Without						BO				
2" Pipe Mounting Kit for Wall-mount / Dual compartment Housing						B1				
2" Pipe Mounting Kit for Field-mount / Single compartment Housing						B2				
<b>Transmitter Software Function Package</b>										
Legacy support / Backward compatibility							NFL			

1) Not available with Single Compartment Housing

2) Not available with -40°C. Not available with Single Compartment Housing

3) Not available with Zone 1 / Div. 1

4) Current output (active or passive) can be configured on site

## Accessories

Description	Order code
Infrared service port adapter FZA100	FZA100
	
Installation set for NPT 1/2" cable gland. For sealing the cable conduit during outdoor installation.	3KXF081300L0001
	
Adapter M20x1.5 to 1/2"NPT	D365B269U01
	
Signal cable	D173D031U01
